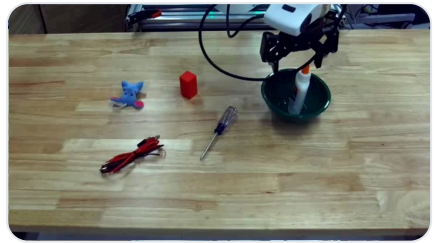
Task: “Pick up the doll and put it in the basket.”

DEDUCTIVE REASONING

The doll isn’t in view — infers it’s hidden and looks under the box.

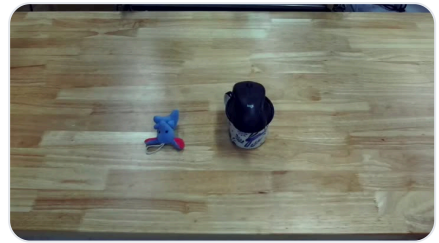
Task: “A child’s coming — bowl what they’d play with.”



SAFETY REASONING

Takes the glue out of the bowl, keeps the screwdriver and cables out — only the toys go in.

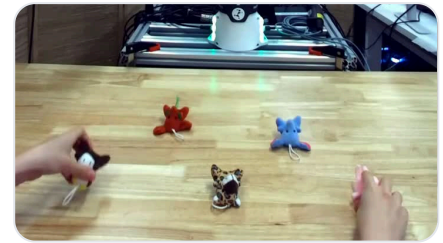
Task: “Put the doll in the cup.”



OBSTACLE REASONING

The cup is occupied — clears the toy mouse before placing the doll.

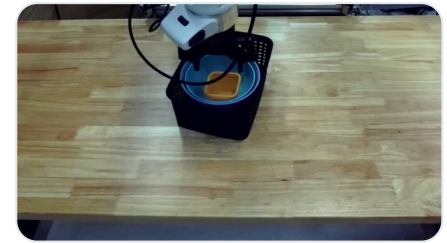
Task: “Memorize the scene, then restore it after a shuffle.”



LONG-HORIZON MEMORY

Looks away while shuffled, then restores every object from memory.

Task: “Stack the containers by size.”



SPATIAL REASONING

Stacks largest-to-smallest for a stable base.
